

**CLAIMS**

We claim:

1. A computerized method for generating a recommendation of an  
5 item to an advisee, comprising the steps of:

receiving a recommendation request from an advisee for a  
recommendation by a recommendation system;

in response to the recommendation request, computing a  
plurality of similarity factors that indicate similarity between  
10 the advisee and a plurality of users of the recommendation system  
who have previously provided ratings of a plurality of items;

selecting, from the plurality of users of the recommendation  
system, neighboring users to the advisee, according to the  
similarity factors;

15 generating a recommendation of at least one item of the  
plurality of items, according to the previously provided ratings of  
the plurality of items by the neighboring users.

2. The method of claim 1, wherein the recommendation request  
includes a selected item list, and wherein all items upon which the

step of computing depends are included in the selected item list.

3. The method of claim 2, wherein the recommendation of at least one item includes only items that are included in the selected item  
5 list.

4. The method of claim 1, wherein the step of selecting neighboring users excludes any user whose similarity with the advisee is below a predetermined threshold.

5. The method of claim 1, wherein the step of step of computing  
10 and the step of selecting are executed substantially in parallel by inserting each newly computed similarity factor into a neighbor list in decreasing order of similarity and by limiting length of the neighbor list by excluding a user with lowest similarity if otherwise the neighbor list would exceed a predetermined length.

15 6. The method of claim 1, further including the step of caching identifiers of the neighboring users, associated similarity factors, and time stamps.

7. A user profile for a recommendation system, comprising a plurality of records, each record including a user identifier, an  
20 item identifier, and a rating value, wherein each record is linked
